

# Login and Welcome Page

When you have successfully installed and set up your instance of Joget:

1. Access it by launching your browser and going to <http://localhost:8080/jw>. The first page you will see is the welcome and login page.
2. The **default** username and password is **admin/admin**. You may change them later on.

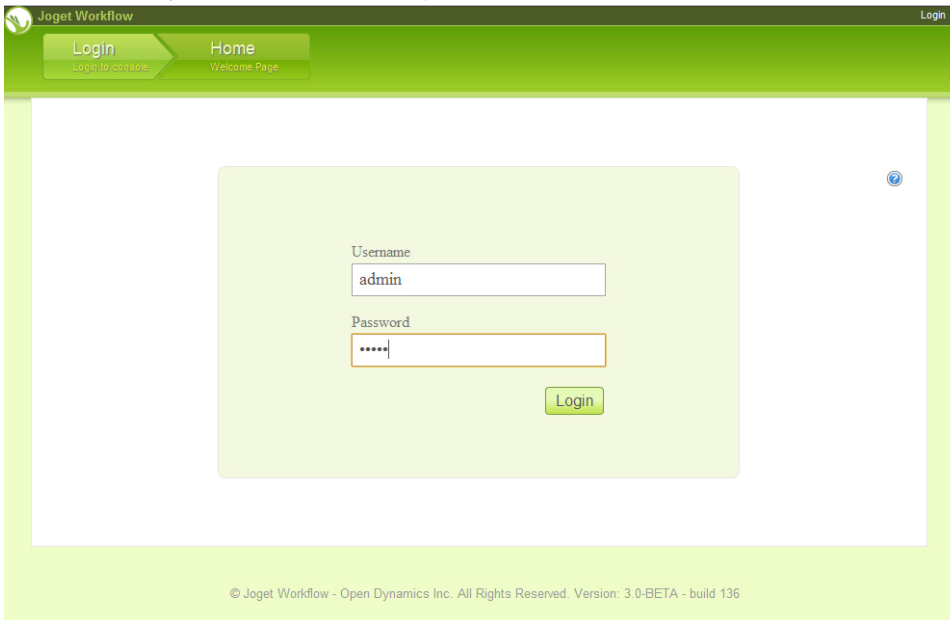

Figure 1: Joget Workflow Login Page

A few things to note:

- If you're accessing this thru a network and can't seem to connect, make sure your host server (the machine where Joget is installed) has the necessary firewall configuration that allows port 8080 access.
- In some older browsers, you'll need to explicitly type "http://" or you'll just get an error page.
