

Bug with App Generator and disaster on Userview

Hi Joget Team,

I was creating a new form with Form Builder and then, in App Generator I did selected the following:

****Generate List**

-Default options

****Generate CRUD**

-Use Generated List

-Userview: Gestión de la Producción - XYZ S.A.C. (*Existing Userview*)

****Generate Approval Process**

-Nothing selected (can't check on after the first use)

After this, I wanted to launch the user view and I got the following error:

Page Not Found (Code 404)

Sorry, the page requested is not found.

If you have been brought to this page unintentionally, please report the previous URL for troubleshooting purposes.

Click here to go back to the main page

All the already test I was doing got lost, and, this test was like my real implementation to take it to production. Please hope you can restore that Userview.

Thank in advance.
