

Can i access the hash values from a JavaScript written in a Custom HTML field

I wrote the following JavaScript inside a Custom HTML field at a Joget form:-

```
<script type = "text/javascript">
$(document).ready(function () {
    var paId = #variable.imagurl#;

    var fullurl = 'http://localhost:8080/jw/web/json/workflow/process/list?
j_username=kermit&hash=9449B5ABCFA9AFDA36B801351ED3DF66&loginAs=customerservice&packageId=' + paId;
$.ajax({
    type: "GET",
    url: fullurl,
    dataType: "JSONP",

    // code goes here
</script>
```

So i need to access the value of the workflow variable using the following:-

```
var paId = #variable.imagurl#;
```

But it seems that I am unable to do so. so my question is how i can access the hash variables from a JavaScript written in Custom HTML field at the joget forms?

Best Regards
