

## Can't Load Form Grid Data using Bean Shell Form Binder

Hi,

i want to copy an exactly grid form but from a different form, and in this new grid form i'm adding a new column.

right now my code is like this:

```
import org.joget.apps.form.model.*;

import org.joget.apps.form.service.*;

import java.sql.*;

import org.apache.commons.collections.SequencedHashMap;

import java.util.*;

public FormRowSet test() {

    FormRowSet f = new FormRowSet();

    Class.forName("com.mysql.jdbc.Driver").newInstance();

    con = DriverManager.getConnection("jdbc:mysql://localhost:3306/jwdb?characterEncoding=UTF-8", "root", "
");

    if(!con.isClosed()){

        String recordId = "#form.eStationary_request.field1#"; // Get the url parameter

        String sql = "SELECT c_item FROM app_fd_eStationary_request WHERE id=?"; // Here you can query
from one or multiple tables using JOIN etc

        PreparedStatement stmt = con.prepareStatement(sql);

        stmt.setString(1, recordId);

        ResultSet rs = stmt.executeQuery();

        while (rs.next()) {

            FormRow r1 = new FormRow();

            r1.put("item_quantity", rs.getString(1));

            r1.put("item_desc", rs.getString(2));

            f.add(r1);

        }

    }

    return f;

}

return test();
```

it doesn't seem to work. i obtained this code from here. : [Load & Store Form Grid Data Using Bean Shell Form Binder](#)

Hope someone can help me with this... need help!...

Regards,

Nairni F
