

Deploying a workflow variable as a Dropdownlist instead of being a free text

I am new to Joget , and i tried to implement the "Simple Leave Application" mentioned in the Joget website Knowledge base. But to make the case more professional ; I have a simple question on how i can modify the "status" Workflow Variable from being a free text -as mentioned in the demo on the web site-to be a dropdownlist which contains two values either "Approved" or "Reject".
