

Adjust Pop Up Size for Form Grid and List Grid

Place the following code in Custom HTML in the form where it contains the form grid / list grid.

Form Grid

```
<script>
  $(function(){
    //make formgrid popup wider
    FormUtil.getField("items").find("#width").val("90%");
    FormUtil.getField("items").find("#height").val("90%");
  });
</script>
```

List Grid

```
<script>
  $(function(){
    //make listgrid popup wider
    FormUtil.getField("items").data("width", "90%");
    FormUtil.getField("items").data("height", "90%");
  });
</script>
```

Replace "items" with the field ID of the grid element appropriately.
