

Joget App Single Sign On with Liferay Portal

Hi,

I am evaluating Joget for use with our Liferay Portal. What I would like to do is embed a Joget App into Liferay Portal using an iFrame.

I'm trying to figure out the best way to Single Sign On from Liferay Portal (or OpenAM) to Joget. I have seen some discussions around using Javascript to facilitate the Sign On but it involves sending the password in plain text.

Is there a more secure way to go about this type of integration in V3?

Thanks,
Jamie
