

Cant start Workflow designer - Ubuntu

Hi

I Have installed Joget community under Ubuntu 11.10, and it all seems good.... but when I click on the button "Launch Workflow Designer" it prompts me to save a files - webstart.jnlp. It does this even if I save the file and then launch it.

I also cant launch the designer separately using <http://localhost:8080/wflow-designerweb/webstart> - it gives the following error page:

Any help appreciated

David
